KPEN™
Cartridge & Battery + Charger **Starter Guide**

Quick Start

- Step 1. Remove clear rubber stopper from KPEN Cartridge (Diagram f)
- Step 2. Twist KPEN Cartridge into KPEN Battery (f -> j)
- Step 3. Prime Cartridge (3 small puffs)
- Step 4. Enjoy!

KPEN Cartridge Diagram

- | | | |
|-----------------|-----------------------|---------------------------|
| a. Mouthpiece | e. Airflow | i. 510 Connector - Male |
| b. Oil Wick | f. 510 Connection | j. 510 Connector - Female |
| c. Heated Coil | g. USB Male Connector | k. On/Off LED |
| d. Vape Chamber | h. Charge Indicator | l. Pen Stylus |

Note: Oil fill level may appear to vary on new cartridges due to settling in vape chamber (d)

Pre-Priming

- 1 Full inhalation before twisting cartridge to battery.

Priming

Prime atomizer cartridge by taking 3 slow, less than full inhales (should equate to approximately 1 dose or a single full inhalation). This allows the oil to properly absorb into the atomizer chamber via the cartridge wick.

Dosing Considerations

Effects will vary between individuals. The size of an inhalation will also impact the effect.

Rapid-acting Kurvana oils are often felt instantly, but may take up to 15 minutes to feel its full effect. Therefore, we recommend waiting at least 15 minutes before administering an additional dose.

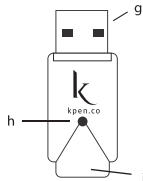

Half gram KPEN Original Cartridges contain approximately 100 doses.
Full gram KPEN Original Cartridges contain approximately 200 doses.

Flexible Dosing

For less experienced and first time patients, the recommended starting dose is 3 mg. More experienced patients may require a few doses to achieve desired effects.

Simple **3 mg** starting dose:

- 1 full inhalation (while inhaling, the LED lights will light up for 6 seconds, then blink and turn off, indicating a full inhalation) equates to approximately 3 mg.

KPEN Charger Specifications

- Color: Black
- Input: DC 5.0V
- Output: 5.0V 120mA
- USB Charger

KPEN Battery Specifications

- Diameter: 9.6mm
- Length: 86.6mm
- Weight: 20g
- Capacity: 280mA
- Working Voltage: 3.3V-4.2v
- Full Charge: ~300 Puffs

Do not exceed more than 3.9V or 8 watts. Using a vaporizer pen higher than recommended will cause an unpleasant burnt taste or short the coil.

It is recommended that products are used only with genuine rechargeable KPEN vaporizer batteries.

Standby Mode

When the KPEN battery is not in use, standby mode is on. Inhalation to the mouthpiece turns on device automatically.

Using KPEN Battery

The built-in LED light will turn on/off automatically when the KPEN battery is in use.

Low Battery Warning

When the battery voltage is lower than 3.3V, the blue LED will flash. If the battery is low, we recommend charging the battery to get the best Kurvana experience.

Charging

Connect the adapter through a USB port. Charging LED indicator light will display red when battery is low. When the charging is complete (3-4 hours), the LED indicator light will turn green.

Warning

- Do not exceed more than 3.9V or 8 watts. Using a vaporizer pen higher than recommended will cause an unpleasant burnt taste or short the coil.
- Do not use battery or devices that appear damaged.
- Do not drop, damage, or tamper with batteries.
- Do not connect improperly.
- Do not shake vigorously for extended periods of time
- Do not smoke consecutively for more than 3 puffs without giving cartridge time to cool down (approx. 2 minutes.)
- Misuse of vaping devices may cause overheating, malfunction, and/or burns or injury.
- Do not expose the KPEN to extreme pressure changes
- Always store KPEN device in temperatures between 60°F and 78°F. Avoid direct sunlight, such as in a car on a hot, sunny day.

Warranty

In the event of a defect or failure with any portion of this product, return to your collective or email hello@kpen.co for a free replacement within 90 days of your donation.
